Thematic Analysis

This document reports the thematic analysis table derived from the educator interviews and used to inform the co-design process described in the paper.

Table 1: Thematic Analysis of Educator Interviews: Needs and Design Insights

Themes	**Codes**	**Description & Quotes**
Emotional & Relational Dynamics	Emotion Recognition; Emotional Contagion; Relational Autonomy	Educators emphasized that true independence involves "relational autonomy," which requires recognizing both one's own emotions and those of others to prevent the spread of distress. *(P3, Interview 1): "Autonomy is not about knowing how to run the washing machine... it is relational autonomy, and relational autonomy must recognize your own emotions and those of your peer."* *(P3, Interview 1): Mentioned the risk of an "uncontrolled spread of emotional contagion."*
Personalization to User Specifics	Individual Variability; Subject-specific Calibration; Rejecting Broad Labels	The technology must adapt to the unique history and behavioral traits of each individual rather than relying on broad clinical diagnoses. *(P1, Interview 1): "We should always start from people's stories... not from the diagnosis."* *(P2, Interview 2): "I would like to have a personalized artificial intelligence... so that if a new person enters the center... the system could be personalized."*
Non-Diagnostic "Reading Reality"	Human-in-the-Loop; Objective Observation; Real-time Alerting	The AI system should act as a supportive tool that provides objective observations without attempting to replace human clinical judgment. *(P2, Interview 2): Validated the tool as "tools for reading reality... for reading a fact."*
Unsupervised Context Monitoring	Unstructured Socialization; Post-lunch Breaks; Privacy Constraints	Monitoring is considered most valuable during unstructured social moments where direct supervision is lower, such as post-lunch breaks, while balancing privacy. *(P2, Interview 2): "During the post-lunch break, for example... the operator would step away... and the attendees are on their own... there is always an operator moving through the corridors, and they could be helped by this type of device."* *(P1, Interview 2): "We struggle a bit... due to the privacy issue, because then everyone enters."*
